Why is it important to get a Baseline range of motion test and a Baseline strength test?

Utilizing this state of the art equipment has allowed Arora Family Chiropractic to find patients at risk for injury, aid in formulating strengthening and therapy plans, and be proactive by finding and treating areas of concern that may not have been found without this technology. Due to the high physical demands that you go through on a daily basis it is very important to obtain a Baseline for current and future treatment reference and protocols.

If you have any questions or concerns or would like to receive a complete protocol based on physical demands of your occupation or specific to a certain injury please call: Arora Family Chiropractic at your convenience.

Tracker Freedom Wireless Computerized Muscle Testing sets a new standard for evaluating strength loss due to injury or disease. It is the only system that combines research-proven dynamometer muscle testing with radio-frequency wireless computer interface and enhanced software. The result is more natural, efficient muscle testing that provides quantified objective data for differential diagnosis, treatment planning, progress tracking and impairment rating.

Tracker Freedom Inclinometry provides objective range of motion documentation for diagnosis, treatment planning, progress tracking, patient education and medico-legal cases.
